SUMMARY

Fourth-year Computer Engineering student at Selçuk University and a software developer with a strong foundation in C++, C#, SQL, object-oriented programming, and layered architecture. Most of my projects so far have been management systems, such as database-driven inventory and pharmacy systems and a file-based banking system. I am learning ASP.NET Core to expand my skills. I have currently started working on a Student Advising Automation project.

EDUCATION

Selçuk University – Computer Engineering **2023 - 2027 (Expected)**

TECHNICAL SKILLS

- **Programming Languages:** C++, C#
- **Database:** SQL, SQL Server, ADO.NET
- **.NET Development:** .NET Framework, WinForms, Entity Framework
- **Software Concepts:** Object-Oriented Programming, Layered Architecture, Data Structures and Algorithms
- **Tools:** Git, GitHub, Visual Studio

PROJECTS

Pharmacy Management System (In Progress) **C#, SQL Server**

Manages patients, suppliers, and users. During sales, it automatically shows the medicine with the nearest expiration date as the first option. It creates sales and purchase invoices.

POS and Inventory System **C#, Entity Framework, SQL Server**

An application that combines inventory management and point of sale (POS) functions. It creates purchase and sales invoices and manages users, customers, and suppliers.

Bank Management System **C++, OOP, File Handling**

A file-based bank management system. Each user can access only the operations they are authorized for. Deposits, withdrawals, transfers between accounts, and currency exchange can be performed.

Data Structures in C++ **C++, Templates**

Linked lists, dynamic arrays, queues, and stacks were built from scratch. These data structures were then applied in practice in projects such as a queue management system and an Undo/Redo feature.

ContactsDesktop **C#, ADO.NET, WinForms, 3-Tier**

A contact management system developed by reusing the existing business logic and data access layers.

COURSES AND CERTIFICATIONS

Programming Training Course – Programming Advices **Ongoing**

- Completed 18 courses in algorithms, C++, OOP, data structures, C#, and SQL, with 14 certificates available in the portfolio.
- Solved most of the programming problems and exercises on the platform.
- In the database courses, built desktop applications connected to SQL Server using C# and WinForms.
